EQUINIX® | METAL®

Fast, flexible, secure infrastructure when you need it

Make infrastructure your competitive advantage with automated, interconnected Bare Metal as a Service.

Deploy powerful, interconnected bare metal infrastructure in minutes across global locations

The ever-growing volume and speed of global business data poses a constant challenge for digital businesses. For many, the cloud no longer meets their infrastructure requirements without resulting in higher latency, more costs and reduced efficiency. Transform that challenge into an advantage with Equinix Metal®: interconnected global infrastructure available at software speed.

Equinix Metal delivers global, secure, interconnected, integrated and on-demand infrastructure where and when it's needed. As part of Platform Equinix®, digital businesses can deploy new services faster with hybrid public and private cloud infrastructure. Most importantly, Equinix Metal is ready to deploy in minutes, not months. No forced virtualization and no multitenancy means enhanced security. Now available in 24+ global locations.

"By 2025, 90% of Fortune 500 companies will become digital providers, both selling and consuming digital services."

The Global Interconnection Index (GXI) 2023

Benefits

Higher Performance
Reduce time to market and reach users with high-performance compute that can be deployed via popular developer tools.

Choice
Bring your own software and define most aspects of your infrastructure.
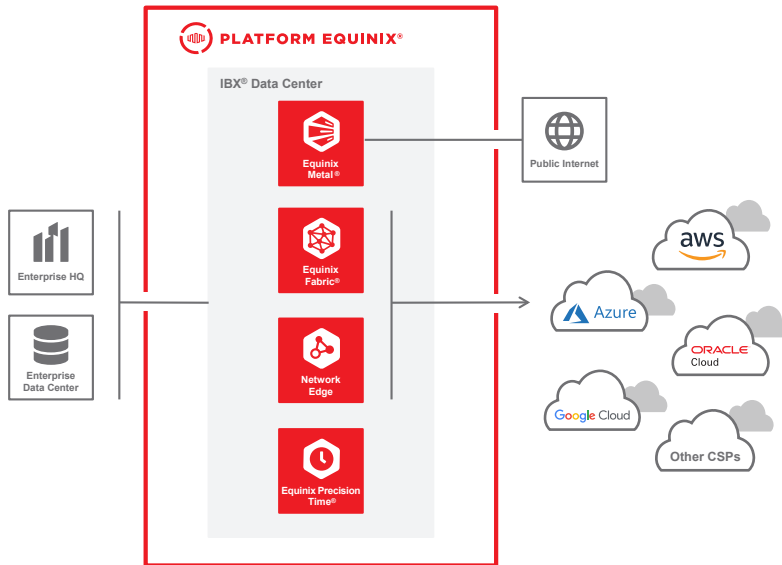

Interconnection
Access the most dynamic global ecosystem of nearly 11,000 companies, including all the clouds and networks in more than 72 regions.

Partners
Rich ecosystem of connectivity, software, integration and value-added service providers.

Security
Equinix Metal offers 100% dedicated single-tenancy, so you can isolate sensitive workloads and access hardware-level security protocols.

How it works

Equinix Metal provides lower latency to and from users on the digital edge: bare metal to cloud, bare metal to colocation and bare metal to internet. It's an ideal solution for organizations seeking to expand their global reach with a unified cloud and edge strategy without disrupting their business.

Key capabilities

Rapid provisioning
It takes only minutes to set up and deploy a single service on Equinix Metal. A full end-to-end deployment can be up and running in an hour—so you can be faster-to-market with applications.

Expanded global reach
Discover and reach anyone on demand—cloud, sellers, partners, vendors, customers and employees—through one connection.

On-demand connectivity
Connect a database or application tier on any cloud, to another database or application tier in the cloud, and internal and external cloud services.

Interconnection services
Award-winning portfolio of physical and virtual interconnection services including the worldwide reach of Equinix Fabric®.

Securely connect and deploy
Enable a data center platform that brings users, networks, applications and cloud systems closer to your data.

Technical specifications

Improved compute and network provisioning
Unlock a company's global presence, helping drive faster growth in new markets without scaling up headcount.

Faster access to customers
Receive developer-friendly, fully automated infrastructure across a global footprint, ensuring faster, neutral access to customers and their networks.

Robust DevOps automation tools
Spin up infrastructure and network connections to cloud and network service providers in minutes with powerful API integration tools.

### Omnipresence with customers in an IoT and 5G world
The present and future of digital commerce is on the edge, closer to the user.

Dedicated single tenancy for increased security
Experience 100% dedicated single-tenant infrastructure, allowing you to isolate sensitive workloads and access hardware-level security protocols.
